

Mining LEED™ for Carbon:

Energy Effective Design and LEED™ Credits

We will dissect this Platinum + Carbon Neutral Building
To see how LEED™ credits can be used as a
spring point to elevate to Carbon Neutral

Comparing Carbon Neutral to LEED™

- LEED™ is a *holistic assessment tool* that looks at the overall sustainable nature of buildings within a prescribed rating system *to provide a basis for comparison* – with the hopes of changing the market
- Projects are ranked from Certified to Platinum on the basis of credits achieved in the areas of Sustainable Sites, Energy Efficiency, Materials and Resources, Water Efficiency, Indoor Environmental Quality and Innovation in Design Process
- **LEED™ does not assess the Carbon value of a building, its materials, use of energy or operation**
- **Most LEED Gold and Platinum buildings earn a maximum of 5/17 of the Energy and Atmosphere Credits!**

- Only 25% of the LEED credits are devoted to energy.
- Of those, 10/70 are for optimization.
- Maximum reduction is 60%.
- **Most LEED buildings earn less than 5 of these credits.....**

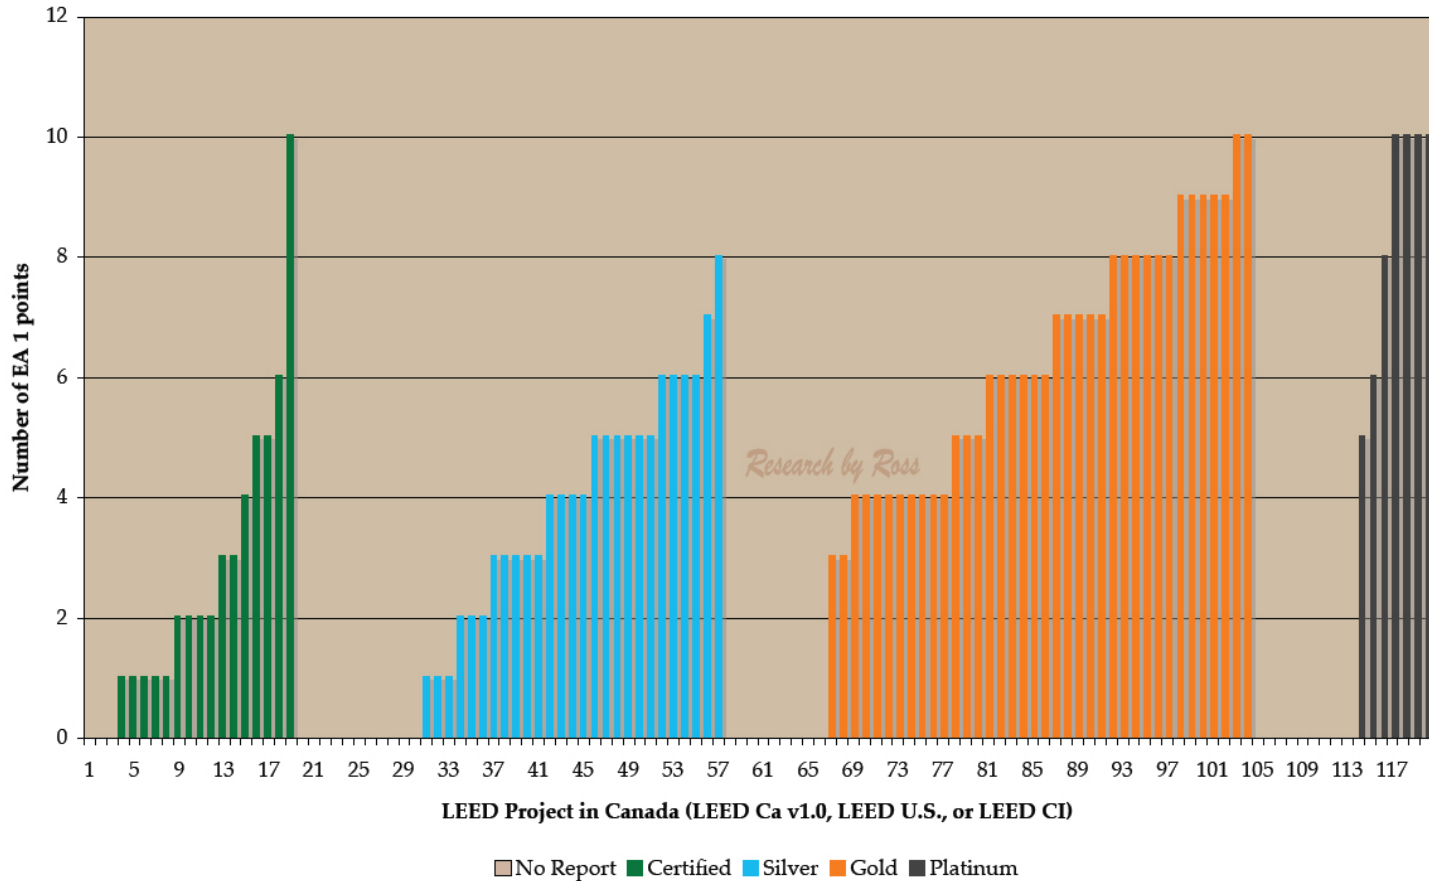

And the first aim of Carbon Neutral Design is to achieve 100% reduction...

10 Energy & Atmosphere		Possible Points: 17
Y	Prereq 1	Fundamental Building Systems Commissioning
Y	Prereq 2	Minimum Energy Performance
Y	Prereq 3	CFC Reduction in HVAC & R Equipment

LEED™ 2009 and Operating Energy

OPTIMIZE ENERGY PERFORMANCE

	NC	CS
Credit	EA Credit 1	EA Credit 1
Points	1-19 points	3-21 points

EA	
NC	Credit 1
CS	Credit 1

INTENT

To achieve increasing levels of energy performance beyond the prerequisite standard to reduce environmental and economic impacts associated with excessive energy use.

REQUIREMENTS: NC & CS

Select 1 of the 3 compliance path options described below. Project teams documenting achievement using any of the 3 options are assumed to be in compliance with EA Prerequisite 2: Minimum Energy Performance

OPTION 1. WHOLE BUILDING ENERGY SIMULATION (1-19 points for NC, 3-21 points for CS)

EITHER

PATH 1. Model National Energy Code For Buildings (MNECB)

Demonstrate a percentage cost improvement in the proposed building performance rating compared with the reference building performance rating. Calculate the reference building performance according to the Model National Energy Code for Buildings 1997 (MNECB) using a computer simulation model for the whole building project. The minimum energy cost savings percentage for each point threshold is as follows:

LEED™ 2009 and Operating Energy: Path 1 Model National Energy Code for Buildings

NEW BUILDINGS	EXISTING BUILDING RENOVATIONS	POINTS FOR NC	POINTS FOR CS
25%	21%	1	3
27%	23%	2	4

The energy analysis done for the building performance rating method must include all the energy costs associated with the building project. To achieve points under this credit, the proposed design must meet the following criteria:

- Compliance with the mandatory provisions of the MNECB 1997.
- Inclusion of all the energy costs within and associated with the building project.
- Comparison against a baseline building that complies with the reference building requirements as defined in the MNECB 1997.

LEED™ 2009 and Operating Energy: ASHRAE 90.1 - 2007

OR

PATH 2. ASHRAE 90.1-2007, Energy Standard for Buildings Except Low-Rise Residential Buildings

Demonstrate a percentage cost improvement in the proposed building performance rating compared with the baseline building performance rating. Calculate the baseline building performance according to Appendix G of ANSI/ASHRAE/IESNA Standard 90.1-2007 (with errata but without addenda³) using a computer simulation model for the whole building project. The minimum energy cost savings percentage for each point threshold is as follows:

LEED™ 2009 and Operating Energy: ASHRAE 90.1 - 2007

Engineering

IslandWood – Using the LEED™ System

A high LEED™ rating can be used as the basis for considering extending performance to Zero Carbon.

Need also to go “back to the basics” of:

- ✓ Orientation
- ✓ Climate
- ✓ Passive solar design
- ✓ Passive cooling
- ✓ Daylighting
- ✓ Low impact materials: low embodied energy, reclaimed, recycled
- ✓ Minimization of site impact
- ✓ Maximizing energy efficiency of envelope and building
- ✓ Reduction of electricity usage
- ✓ Minimizing need for additional fuel – maximizing on site renewables

IslandWood – Sustainable Sites

(9/14 possible points)

SS Prerequisite 1, Erosion & Sedimentation Control
SS Credit 1, Site Selection

Inference of reduced carbon emissions from personal transportation

SS Credit 4.1, Alternative Transportation, Public Transportation Access
SS Credit 4.2, Alternative Transportation, Bicycle Storage & Changing Rooms
SS Credit 4.4, Alternative Transportation, Parking Capacity

People, "Use" + Transportation

SS Credit 5.1, Reduced Site Disturbance, Protect or Restore Open Space
SS Credit 5.2, Reduced Site Disturbance, Development Footprint

SS Credit 6.2, Stormwater Management, Treatment
SS Credit 7.1, Landscape & Exterior Design to Reduce Heat Islands, Non-Roof
SS Credit 8, Light Pollution Reduction

Inference of reduced carbon emissions from site disturbance and possible sequestration potential from restoration of green elements

Landscape + Site

IslandWood – Sustainable Sites (9/14 possible points)

Overview map of the development showing topography and building clustering to ensure the minimum disruption and impact on the land.

IslandWood – Sustainable Sites (9/14 possible points)

- Wetland was protected
- Building done on most degraded part of site
- Buildings were clustered to 3% of the site
- Parking was limited
- Pathways mostly pervious
- Landscape was considered to promote indigenous species

IslandWood – Energy and Atmosphere

(4/17 possible points)

EA Prerequisite 1, Fundamental Building Systems Commissioning

EA Prerequisite 2, Minimum Energy Performance

EA Prerequisite 3, CFC Reduction in HVAC&R Equipment

EA Credit 1.1a, Optimize Energy Performance, 15% New 5% Existing

EA Credit 1.1b, Optimize Energy Performance, 20% New 10% Existing

EA Credit 1.2a, Optimize Energy Performance, **25% New** 15% Existing

EA Credit 4, Ozone Depletion

Although there is PV on the building, it is not enough to earn any of these credits, so obviously not enough to satisfy a carbon neutral state

Not using Green Power indicates that electricity purchased *may* be from coal based sources

4 Energy & Atmosphere		Possible Points: 17
Y	Prereq 1	Fundamental Building Systems Commissioning
Y	Prereq 2	Minimum Energy Performance
Y	Prereq 3	CFC Reduction in HVAC&R Equipment
2	Credit 1.1	Optimize Energy Performance, 20% New / 10% Existing
1	Credit 1.2	Optimize Energy Performance, 30% New / 20% Existing
	Credit 1.3	Optimize Energy Performance, 40% New / 30% Existing
	Credit 1.4	Optimize Energy Performance, 50% New / 40% Existing
	Credit 1.5	Optimize Energy Performance, 60% New / 50% Existing
	Credit 2.1	Renewable Energy, 5%
	Credit 2.2	Renewable Energy, 10%
	Credit 2.3	Renewable Energy, 20%
	Credit 3	Additional Commissioning
1	Credit 4	Ozone Depletion
	Credit 5	Measurement & Verification
	Credit 6	Green Power

The building was designed to work with the Bioclimatic condition of Bainbridge Island. **West Coast (coastal)Temperate.**

IslandWood – Passive Design Strategies: Heating and Cooling

IslandWood – Energy and Atmosphere

(4/17 possible points)

- Exploration of passive heating systems
- Solar orientation, creation of “solar meadow” to ensure solar gain
- Large overhangs to prevent overheating
- Natural ventilation
- Solar hot water heating
- Photovoltaic panels

Although the appearance of the buildings gives the impression that its energy use might be as low as a Carbon Neutral Building, the numbers do not bear the same conclusion. ZERO Carbon is a number...

IslandWood – Water Efficiency

(5/5 possible points)

WE Credit 1.1, Water Efficient Landscaping, Reduce by 50%

WE Credit 1.2, Water Efficient Landscaping, No Potable Water Use or No Irrigation

WE Credit 2, Innovative Wastewater Technologies

WE Credit 3.1, Water Use Reduction, 20% Reduction

WE Credit 3.2, Water Use Reduction, 30% Reduction

There is a soft connection between Water Efficiency and Carbon Neutrality if you think of an associated reduction in the energy requirement to run systems (i.e. electricity for pumps)

IslandWood – Water Efficiency

(5/5 possible points)

- Rainwater collection from all roofs – use water for irrigation
- Composting toilets
- Waterless urinals and low flush toilets
- Living Machine to treat blackwater to tertiary level of purification

Statistics show that Water Efficiency credits have the highest percentage of buy in on LEED™ projects.

IslandWood – Materials and Resources

(7/13 possible points)

MR Prerequisite 1, Storage & Collection of Recyclables

MR Credit 2.1, Construction Waste Management, Divert 50%

MR Credit 2.2, Construction Waste Management, Divert 75%

MR Credit 3.1, Resource Reuse, Specify 5%

MR Credit 4.1, Recycled Content: 5% (post-consumer + 1/2 post-industrial)

MR Credit 5.1, Local/Regional Materials, 20% Manufactured Locally

MR Credit 5.2, Local/Regional Materials, of 20% Above, 50% Harvested Locally

MR Credit 7, Certified Wood

These credits address the embodied energy of materials which responds to future Carbon Neutral considerations when we go beyond Operating Energy

Embodied Carbon in Building Materials

IslandWood – Materials and Resources

(7/13 possible points)

- All timber cleared on site was milled into siding and furniture
- Buildings designed with exposed structural systems, including roof trusses, wood shear walls, and concrete slabs, eliminating need for interior finish materials
- Concrete with 50% flyash
- strawbale used for studio
- innovative recycled content “everywhere”

IslandWood – Indoor Environmental Quality

(12/15 possible points)

- EQ Prerequisite 1, Minimum IAQ Performance
- EQ Prerequisite 2, Environmental Tobacco Smoke (ETS) Control
- EQ Credit 1, Carbon Dioxide (CO2) Monitoring
- EQ Credit 2, Increase Ventilation Effectiveness
- EQ Credit 3.1, Construction IAQ Management Plan, During Construction
- EQ Credit 3.2, Construction IAQ Management Plan, Before Occupancy
- EQ Credit 4.1, Low-Emitting Materials, Adhesives & Sealants
- EQ Credit 4.2, Low-Emitting Materials, Paints
- EQ Credit 4.3, Low-Emitting Materials, Carpet
- EQ Credit 4.4, Low-Emitting Materials, Composite Wood
- EQ Credit 5, Indoor Chemical & Pollutant Source Control
- EQ Credit 6.1, Controllability of Systems, Perimeter
- EQ Credit 7.1, Thermal Comfort, Comply with ASHRAE 55-1992
- EQ Credit 8.2, Daylight & Views, Views for 90% of Spaces

Operating energy

Daylighting has the potential to reduce the requirement for electricity IF used in conjunction with control systems

Daylit spaces at Islandwood

IslandWood – Indoor Environmental Quality (12/15 possible points)

- All buildings are extensively daylight
- windows are operable
- extensive incorporation of low emitting materials

IslandWood – Innovation in Design Process

(3/5 possible points)

ID Credit 1.1, Innovation in Design "Environmental Education"

ID Credit 1.2, Innovation in Design "High Volume Fly Ash"

ID Credit 2, LEED® Accredited Professional

Carbon Neutrality could be used to gain an Innovation Credit or Multiple Innovation Credits if you exceed the maximum expectations in a number of credit areas.

Leopold Approach to Carbon Neutral Design

- **Design a Net Zero (Operating Energy) Building**
- **Apply Carbon Balance to Building Operation
(Ignore Carbon Emissions due to
Construction)**
- **Include Carbon Sequestration in Forests
Managed by Aldo Leopold Foundation**
- **Design to LEED™ Platinum (as well)**

The South elevation is designed to capture energy.

The North elevation is designed for thermal resistance, daylighting and ventilation.

The buildings were arranged in a U shape around a solar meadow that ensured access

Architectural Design Strategies

- Start with bioclimatic design
- Program Thermal Zones
- All perimeter zones (no interior zones – skin load dominated building)
- Daylight all occupied zones
- Natural ventilation in all occupied zones
- Double code insulation levels
- Passive solar heating
- Shade windows during summer

SS Credit 6.2, Stormwater Management, Treatment

SS Credit 7.1, Landscape & Exterior Design to Reduce Heat Islands, Non-Roof

SS Credit 7.2, Landscape & Exterior Design to Reduce Heat Islands, Roof

SS Credit 8, Light Pollution Reduction

Landscape
+ Site

These credits can add plant materials to a site that are capable of sequestering carbon or repair existing natural landscape. Disturbance of the soil releases carbon into the atmosphere.

Sustainable Sites, 12 of 14 possible points:

SS Credit 7

SS Prerequisite 1, Erosion & Sedimentation Control

SS Credit 1, Site Selection

SS Credit 3, Brownfield Redevelopment

SS Credit 4.2, Alternative Transportation, Bicycle Storage & Changing Rooms

SS Credit 4.3, Alternative Transportation, Alternative Fuel Refueling Stations

SS Credit 4.4, Alternative Transportation, Parking Capacity

SS Credit 5.1, Reduced Site Disturbance, Protect or Restore Open Space

SS Credit 5.2, Reduced Site Disturbance, Development Footprint

SS Credit 6.1, Stormwater Management, Rate and Quantity

SS Credit 6.2, Stormwater Management, Treatment

SS Credit 7.1, Landscape & Exterior Design to Reduce Heat Islands, Non-Roof

SS Credit 7.2, Landscape & Exterior Design to Reduce Heat Islands, Roof

SS Credit 8, Light Pollution Reduction

Landscape
+ Site

Operating
energy

Heat island reduction lowers summer temperatures and reduces cooling load. (*Impossible to quantify...*) If plantings are used to do this, they can sequester carbon as well.

Material choice matters.

- **Material choice can reduce your building's *embodied* carbon footprint.**
- Where did the material come from?
- Is it local?
- Did it require a lot of energy to extract it or to get it to your building?
- Can it be replaced at the source?
- Was it recycled or have significant post consumer recycled content?
- Can it be recycled or reused *easily*; i.e. with minimal additional energy?
- Is the material durable or will it need to be replaced (*lifecycle analysis*)?
- **Select the right material for the right end use**

Foster's GLA – may claim to be high performance, but it uses many high energy materials.

Green on the Grand, Canada's first C-2000 building chose to import special windows from a distance rather than employ shading devices to control solar gain and glare.

Transportation choice matters.

Materials and Resources, 7 of 13 possible points: MR Credit 4

MR Prerequisite 1, Storage & Collection of Recyclables

MR Credit 2.1, Construction Waste Management, Divert 50%

MR Credit 2.2, Construction Waste Management, Divert 75%

MR Credit 4.1, Recycled Content: 5% (post-consumer + 1/2 post-industrial)

MR Credit 4.2, Recycled Content: 10% (post-consumer + 1/2 post-industrial)

MR Credit 5.1, Local/Regional Materials, 20% Manufactured Locally

MR Credit 5.2, Local/Regional Materials, of 20% Above, 50% Harvested Locally

MR Credit 7, Certified Wood

Embodied
Carbon in
Building
Materials

Many of the MR credits will impact embodied carbon but it is not currently part of the calculation.

The Life of Steel:

1st life as:

Materials and Resources, 7 of 13 possible points: MR Credit 5

MR Prerequisite 1, Storage & Collection of Recyclables

MR Credit 2.1, Construction Waste Management, Divert 50%

MR Credit 2.2, Construction Waste Management, Divert 75%

MR Credit 4.1, Recycled Content: 5% (post-consumer + 1/2 post-industrial)

MR Credit 4.2, Recycled Content: 10% (post-consumer + 1/2 post-industrial)

MR Credit 5.1, Local/Regional Materials, 20% Manufactured Locally

MR Credit 5.2, Local/Regional Materials, of 20% Above, 50% Harvested Locally

MR Credit 7, Certified Wood

Embodied
Carbon in
Building
Materials

People, "Use" +
Transportation

The Leopold Foundation had a most unusual circumstance, owning their own Forest. However it is not that difficult to source materials locally.

Materials and Resources, 7 of 13 possible points: MR Credit 7

MR Prerequisite 1, Storage & Collection of Recyclables

MR Credit 2.1, Construction Waste Management, Divert 50%

MR Credit 2.2, Construction Waste Management, Divert 75%

MR Credit 4.1, Recycled Content: 5% (post-consumer + 1/2 post-industrial)

MR Credit 4.2, Recycled Content: 10% (post-consumer + 1/2 post-industrial)

MR Credit 5.1, Local/Regional Materials, 20% Manufactured Locally

MR Credit 5.2, Local/Regional Materials, of 20% Above, 50% Harvested Locally

MR Credit 7, Certified Wood

Simply using wood is thought to be helpful in GHG as wood sequesters carbon. But this only makes sense if wood is the best or most local choice. Other materials may work better for different building types, uses, Fire code restrictions, etc.

Embodied
Carbon in
Building
Materials

#2 - Site Harvested Lumber:

Embodied
Carbon in
Building
Materials

The building was designed around the size and quantity of lumber that could be sustainably harvested from the Leopold Forest.

Reuse to reduce impact

- Reuse of a building, part of a building or elements reduces the carbon impact by avoidance of using new materials.
- Make the changes necessary to improve the operational carbon footprint of an old building, before building new.
- Is there an existing building or Brownfield site that suits your needs?
- Can you adapt a building or site with minimal change?
- Design for disassembly (Dfd) and eventual reuse to offset future carbon use

The School of Architecture at Waterloo is a reused factory on a remediated Brownfield site.

All of the wood cladding at the YMCA Environmental Learning Center, Paradise Lake, Ontario was salvaged from the demolition of an existing building.

Materials and Resources, other opportunities

MR Credit 1

People, "Use" +
Transportation

MR 1.1 **Building Reuse:** Maintain 75% of Existing Walls, Floors, and Roof
MR1.2 **Building Reuse:** Maintain 95% of Existing Walls, Floors, and Roof
MR1.3 **Building Reuse:** Maintain 50% of Interior Non-Structural Elements

Embodied
Carbon in
Building
Materials

- Reuse **SIGNIFICANT** building elements in order to reduce the need for extraction and processing of new materials
- This saves a significant amount of embodied carbon
- This also saves associated transportation energy as all of this material does not need to be transported to the building site (again)

Materials and Resources, other opportunities

MR Credit 3

MR Credit 3.1 Resource Reuse 5%

MR Credit 3.2 Resource Reuse 10%

Embodied
Carbon in
Building
Materials

- Reuse materials in order to reduce the need for extraction and processing of new materials
- This is very helpful in the reuse of demolished structures
- Structural steel can be easily reused
- Wood can be reused for flooring

Indoor Environmental Quality, 15 of 15 possible points: EQ Prerequisite 2

EQ Prerequisite 1, Minimum IAQ Performance

EQ Prerequisite 2, Environmental Tobacco Smoke (ETS) Control

EQ Credit 1, Carbon Dioxide (CO2) Monitoring

EQ Credit 2, Increase Ventilation Effectiveness

EQ Credit 3.1, Construction IAQ Management Plan, During Construction

EQ Credit 3.2, Construction IAQ Management Plan, Before Occupancy

EQ Credit 4.1, Low-Emitting Materials, Adhesives & Sealants

EQ Credit 4.2, Low-Emitting Materials, Paints

EQ Credit 4.3, Low-Emitting Materials, Carpet

EQ Credit 4.4, Low-Emitting Materials, Composite Wood

EQ Credit 5, Indoor Chemical & Pollutant Source Control

EQ Credit 6.1, Controllability of Systems, Perimeter

EQ Credit 6.2, Controllability of Systems, Non-Perimeter

EQ Credit 7.1, Thermal Comfort, Comply with ASHRAE 55-1992

EQ Credit 7.2, Thermal Comfort, Permanent Monitoring System

EQ Credit 8.1, Daylight & Views, Daylight 75% of Spaces

EQ Credit 8.2, Daylight & Views, Views for 90% of Spaces

COMMON
SENSE

This requirement presents a huge impediment in Foreign countries.

Indoor Environmental Quality, 15 of 15 possible points: EQ Credit 8

EQ Prerequisite 1, Minimum IAQ Performance

EQ Prerequisite 2, Environmental Tobacco Smoke (ETS) Control

EQ Credit 1, Carbon Dioxide (CO₂) Monitoring

EQ Credit 2, Increase Ventilation Effectiveness

EQ Credit 3.1, Construction IAQ Management Plan, During Construction

EQ Credit 3.2, Construction IAQ Management Plan, Before Occupancy

EQ Credit 4.1, Low-Emitting Materials, Adhesives & Sealants

EQ Credit 4.2, Low-Emitting Materials, Paints

EQ Credit 4.3, Low-Emitting Materials, Carpet

EQ Credit 4.4, Low-Emitting Materials, Composite Wood

EQ Credit 5, Indoor Chemical & Pollutant Source Control

EQ Credit 6.1, Controllability of Systems, Perimeter

EQ Credit 6.2, Controllability of Systems, Non-Perimeter

EQ Credit 7.1, Thermal Comfort, Comply with ASHRAE 55-1992

EQ Credit 7.2, Thermal Comfort, Permanent Monitoring System

EQ Credit 8.1, Daylight & Views, Daylight 75% of Spaces

EQ Credit 8.2, Daylight & Views, Views for 90% of Spaces

Operating
energy

Passive Lighting Strategies:

- use energy efficient light fixtures (and effectively!)
- use occupant sensors combined with light level sensors
- aim to only have lights switch on only when daylight is insufficient
- provide electricity via renewable means: wind, PV, CHP

Lights on due to occupant sensors when there is adequate daylight – WASTES ENERGY!

Passive Lighting Strategies:

Orientation and building planning

- start with solar geometry
- understand context, sky dome, adjacent buildings and potential overshadowing
- be able to differentiate between sunlight (heat) and daylight (seeing)
- understand occupancy/use requirements
- maximize areas served by daylight
- explore different glazing strategies: side, clerestory, top
- consider light shelves and reflected light

Passive Lighting Strategies: Glare, color, reflectivity and materials

- incorporate light dynamics
- avoid glare
- understand the function of material selection; ie. reflectivity and surface qualities
- balance color and reflectivity with amount of daylight provided

Daylight All Occupied Zones

Electric lights are only ON when there is insufficient daylight. You need a THIN plan to make this work. Depth from window cannot exceed 5 m.

6-1 Daylight-factor curve over the depth of a room with a single-skin facade.

- Amount of light determined by height of room, window design, head height, sill height + colour of surfaces and presence of furniture
- LEED daylight credit requires a minimum Daylight Factor of 2%

Watch out for finish colours. The natural colour of the wood made the left hand space more difficult to light naturally.

Innovation and Design Process, 5 of 5 possible points

ID Credit 1.1, Innovation in Design "Exemplary Performance, EAc6"

ID Credit 1.2, Innovation in Design "Exemplary Performance, EAc2"

ID Credit 1.3, Innovation in Design "Carbon Neutral Building Operation"

ID Credit 1.4, Innovation in Design "Exemplary Performance, MRc5.1"

ID Credit 2, LEED® Accredited Professional

Achieving carbon neutrality will pretty well guarantee ID credits for excesses in other categories.

Carbon Balance Analysis

Use the Greenhouse Gas Protocol
of the World Resources Institute

<http://www.ghgprotocol.org/>

Organizational Boundary:
Aldo Leopold Foundation

Project Boundary:
Aldo Leopold Legacy Center and woodlots
certified for sustainable harvest

Carbon Emissions Accounting

- Scope 1: Direct Emissions
 - **Stationary Combustion (boilers, wood stoves)**
 - **Organizational Vehicles**
- Scope 2: Indirect Emissions
(electricity generation)
- Scope 3: Indirect Emissions
(organizational activities)
 - **Commuting to Work**
 - **Business Travel**

Scope 1: Direct Greenhouse Gas Emissions

	Fuel	Amount	CO ₂ Emissions (metric tons)
Direct combustion	Wood	2 cords	6.7
Vehicles	Gas	1,490 gallons	13.2
Total emissions			19.9

Scope 2: Indirect Greenhouse Gas Emissions (Electricity)

Electricity Source	Amount (kWh/year)	CO ₂ Emissions (metric tons)
Green power contract	33,400	10.6 (offset)
Site solar generation	32,300	10.2 (offset)
Net carbon offset		20.8 (offset)

Scope 2: Indirect Greenhouse Gas Emissions (Organizational Activities)

Activity	Amount	CO ₂ Emissions (metric tons)
Employee commuting	1,800 gallons of gas	16.0
Business travel	36,000 air miles	6.0
Solid waste removal	5,200 pounds	3.4
Total emissions		25.4

Forest Management & Sustainable Harvest

Before Harvest

After Harvest

Site Harvested Lumber:

The building was designed around the size and quantity of lumber that could be sustainably harvested from the Leopold Forest.

Carbon Sequestration

Carbon Absorbed by Managed Forest

Managed Forest Area	Carbon Sequestration Rate	CO ₂ Emissions
35 acres	0.25 IP tons of carbon per acre	29.1 metric tons (offset)

Carbon Balance Summary

	Source	CO ₂ Emissions (metric tons)
Scope 1	Direct emissions	19.9
Scope 2	Indirect emissions: electricity	20.8 (offset)
Scope 3	Indirect emissions: organizational activities	25.4
Carbon sequestered	Managed forest	29.1 (offset)
Net carbon offset		4.6 (offset)

Aldo Leopold Legacy Center Net Electricity Sold to Utility

Modeled Electrical Use [CNC] Modeled Energy Use [ECB]
Metered Electric Use

We end, I think, at what might be called the standard paradox of the 20th century: our tools are better than we are, and grow better faster than we do. They suffice to crack the atom, to command the tides. But they do not suffice for the oldest task in human history: to live on a piece of land without spoiling it.

Aldo Leopold, 1938
